The Mathematical Universe  
John Wiley & Sons  
Martin Gardner's  
Mathematical Games  
columns in Scientific  
American inspired and  
entertained several  
generations of  
mathematicians and  
scientists. Gardner in his  
crystal-clear prose  
illuminated corners of  
mathematics, especially  
recreational mathematics,  
that most people had no  
idea existed. His playful

spirit and inquisitive nature  
invite the reader into an  
exploration of beautiful  
mathematical ideas along  
with him. These columns  
were both a revelation and a  
gift when he wrote them; no  
one--before Gardner--had  
written about mathematics  
like this. They continue to be  
a marvel. This volume is a  
collection of Irving Joshua  
Matrix columns published in  
the magazine from  
1960-1980. There were  
several collections of Dr.  
Matrix, the first in 1967;  
they were revised as Gardner  
reconnected with the good  
doctor over the years. This is  
the 1985 Prometheus Books  
edition and contains all the  
Dr. Matrix columns from the  
magazine.

In

this highly accessible guide, Dr. Eugene Gendlin, the award-winning psychologist who developed the focusing technique, explains the basic principles behind focusing and offers simple step-by-step instructions on how to utilize this powerful tool for tapping into greater self-awareness and inner wisdom. As you learn to develop your natural ability to " focus, " you ' ll find yourself more in sync with both mind and body, filled with greater self-assurance, and better equipped to make the positive changes necessary to improve and enhance every aspect of your life.

Girl at Midnight is the story of a modern girl caught in an ancient war. Beneath the streets of New York City live the Avicen, an ancient race of people with feathers for hair and magic running through their veins. Age-old enchantments keep them hidden from humans. All but one. Echo is a runaway pickpocket who survives by selling stolen treasures on the black market, and the Avicen are the only family she's ever known. Echo is clever and daring, and at times she can be brash, but above all else she's fiercely loyal. So when a centuries-old war crests on the borders of her home, she decides it's time to act. Legend has it that there is a way to end the conflict once and for all: find the Firebird, a mythical entity believed to possess power the likes of which the world has never seen. It will be no easy task, though if life as a thief has taught Echo anything, it's how to hunt down what she wants . . . and how to take it. But some jobs aren't as straightforward as they seem. Focusing on how lessons from kindergarten can help everyone develop the creative thinking skills needed to thrive in today's society. In kindergartens these days, children spend more time with math worksheets and phonics flashcards than building blocks and finger paint. Kindergarten is becoming more like the rest of school. In *Lifelong Kindergarten*, learning expert Mitchel Resnick argues for exactly the opposite: the rest of school (even the rest of life) should be more like kindergarten. To thrive in today's fast-changing world, people of all ages must learn to think and act creatively—and the best way to do that is by focusing more on imagining, creating, playing, sharing,

and reflecting, just as children do in traditional kindergartens. Drawing on experiences from more than thirty years at MIT's Media Lab, Resnick discusses new technologies and strategies for engaging young people in creative learning experiences. He tells stories of how children are programming their own games, stories, and inventions (for example, a diary security system, created by a twelve-year-old girl), and collaborating through remixing, crowdsourcing, and large-scale group projects (such as a Halloween-themed game called *Night at Dreary Castle*, produced by more than twenty kids scattered around the world). By providing young people with opportunities to work on projects, based on their

passions, in collaboration with peers, in a playful spirit, we can help them prepare for a world where creative thinking is more important than ever before.

Social Intelligence Bantam

Digestive Intelligence tells the fascinating story of how our digestive systems are the centre of our bodies' second brain and how we think and live our emotions via our stomachs. Not surprising when you consider there is something equivalent to the size of a village football pitch hiding inside our bellies--that's the incredible magnitude of our digestive systems. Dr Matveikova answers the obvious questions: "How?" and "Why can this

be so?" by explaining, in straight forward layman's language, that the digestive system contains more than one million neurones, identical to those in the brain and is responsible for producing 90% of the body's hormone, serotonin, the all-important hormone which makes us feel happy and full of wellbeing. It follows that, if our stomach is "out of sorts" we feel irritable and lacking in energy; and those feelings block our intellectual productivity, disorientate us and completely change our thought patterns and physical processes.

In lucid and jargon-free prose, the text explains and illustrates educational psychology's practical relevance for teachers and learners. The new edition continues to emphasize the applications of research on child development, on learning and cognition, on motivation, and on instruction and assessment. At the same time the text has long been counted on for its state of the art presentation of the field of educational psychology, and this edition continues that tradition with new and expanded coverage of import topics like the brain and neuroscience, the impact of technology on the lives and

learning of students, and student diversity. From reviews of the book: "I polled my students . . . and the vast majority actually liked the textbook (which is rare). They find it easy to read, interesting and engaging. . . . This textbook's major strengths are its cognitive perspective, its readability, and the fact that it puts into practice some of the information-processing strategies that it teaches as effective ways to process information. . . ."
