How the British rock band Radiohead subverts the idea of the concept album in order to articulate themes of alienation and anti-capitalism is the focus of Marianne Tatom Letts's analysis of Kid A and Amnesiac. These experimental albums marked a departure from the band's standard guitar-driven base layered with complex production effects. Considering the albums in the context of the band's earlier releases, Letts explores the motivations behind this change. She places the two albums within the concept-album/progressive-rock tradition and shows how both resist that tradition. Unlike most critics of Radiohead, who focus on the band's lyrics, videos, sociological importance, or audience reception, Letts focuses on the music itself. She investigates Radiohead's ambivalence toward its own success, as manifested in the vanishing subject of Kid A on these two albums.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
