Manual of Veterinary Investigation Laboratory Techniques - Pt.7 - Parasitology Cengage Learning

Long established as a bestselling parasitology book for veterinary practitioners and veterinary students, the previous edition lead by

Urquhart was praised as '...probably the best available veterinary parasitology text for the practitioner' (Clinical Insight). This third edition of Veterinary Parasitology is a major update which builds on the spirit of earlier editions. New authors with a wealth of experience of teaching and researching the subject have thoroughly revised and restructured the book to reflect modern teaching practice and the most up-to-date coverage of advances in this area. * Arranged by host species and organ systems within the host, with extensive cross-referencing to enable ease of access to information on particular parasites. * The core focus is on parasites of livestock and companion animals, but new sections also cover parasites of poultry and gamebirds, laboratory animals, exotic pets and 'farmed' species. * Expanded sections on protozoa and ectoparasites, as well as coverage of a larger selection of parasites of veterinary significance around the world. * The majority of parasitic diseases are now covered in detail using a standardised format for each parasite to allow easy referencing and identification and for comparison between species within a genus. Suitable for veterinary students, as well as researchers of veterinary parasitology, veterinarians in practice and in government service and others who are involved in aspects of parasitic disease. About the authors: Professor Mike Taylor is head of Veterinary Surveillance at the Central Science Laboratory York, UK. He is also a visiting Professor of Parasitology at the Royal Veterinary College, London and at the University of Wales, Bangor, an Honorary Fellow of the University of Edinburgh, as well as a Diplomate of the European College of Veterinary Parasitology, and Editor-in-Chief of Veterinary Parasitology. Dr Bob Coop was formerly Head of the Division of Parasitology at the Moredun Research Institute, Scotland, and is now Honorary Fellow of the Moredun Foundation. He has over 35 years' experience of research in veterinary parasitology. Richard Wall is Professor of Zoology at the University of Bristol, UK, where he teaches and heads an internationally recognized research group working on the ecology, behaviour and control of arthropod parasites and vectors. He has served as veterinary editor of the journal Medical & Veterinary Entomology and President of the British Association for Veterinary Parasitology; he is a Fellow of the Royal Entomological Society. Veterinary Parasitology Reference Manual John Wiley & Sons
The manual is intended as a tool for the identification and control of the wide spectrum of parasites affecting domestic animals throughout the world. It's of great value for personnel in field laboratories, veterinarians

Diagnostic Parasitology John Wiley & Sons

Recognize and treat the parasites seen in veterinary practice! Diagnostic Parasitology for Veterinary Technicians, 5th Edition features clear and concise discussions of the most commonly encountered internal and external parasites. Chapters are organized by parasite group — including nematodes, cestodes, trematodes, protozoans, arthropods, and leeches — and include a detailed description of the group, with special emphasis on morphology, life cycle, and important parasites. Then in each chapter, material is conveniently organized by host species: dogs, cats, horses, ruminants, swine, birds, lab animals, fish, and reptiles. Written by noted educators Charles Hendrix and Ed Robinson, this full-color, spiral-bound book provides the knowledge that veterinary technicians need to collect samples, perform lab procedures, and communicate with clients and other members of the veterinary team. Clear, concise coverage simplifies information on the most commonly encountered internal and external parasites, preparing you for credentialing exams and the veterinary clinic. More than 470 full-color photos show exactly what ova, adult parasites, and parasitic diseases look like, so you can identify them more easily when viewing lab samples. Step-by-step guidelines in the Laboratory Procedures chapter describe how to gather samples and how to perform the laboratory techniques used in identifying parasites. Emphasis on the zoonotic potential of parasites helps you alert clients and other health care workers to the significance of zoonotic parasites and shows ways in which you can prevent transmission of a zoonotic parasite, condition, or syndrome from animals to humans. Logical chapter organization follows the sequence of parasitology classes, beginning with a basic overview of external parasites, internal parasites, and nematodes, followed by chapters that go into detail of the parasites by host species. An appendix lists the parasites of each species and shows their location in the text, making information easy to find.

Heartworm section helps you recognize and treat heartworms with an in-depth discussion of the performance and interpretation of diagnostic tests for this major parasite. Summary tables show how to categorize parasites, and include such categories as body systems affected, taxonomic grouping, host species, and location in host. Table of parasites at the front of the book is arranged by host species and includes page numbers for cross-reference throughout the book. Vet Tech Threads design makes learning easier with chapter outlines, chapter objectives, key terms, and Technician Notes in every chapter. Chapter on terminology familiarizes you with the basic language and classification scheme of parasitology for more effective communication with clients and colleagues. Flash cards on the Evolve companion website help you learn and memorize key facts about the major parasites, including audio pronunciations. Workbook/textbook format provides immediate review tools through matching exercises and questions for thought and discussion at the end of each chapter.
