The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of

everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce

---

an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how

---

population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

The must-have optical training system whether you are an optometrist, ophthalmologist, or optical manager responsible for training opticians or are an

optician trying to better your skills. Training opticians, new and seasoned, is a daunting task. Are new opticians ready to hit the floor running? Are seasoned opticians remembering the principles that make a good pair of glasses great? These are the questions this book will answer in an easily implemented fashion. Not a text filled with equations and theory never used clinically. This book is written with how you actually practice in

---

mind. Extensive use of short 'Focus Points' help highlight important principles. Understanding of clinical relevance is primary objective of this book, and as such it aims to take you from ordinary to extraordinary in your ability to create and deliver excellence in your optical career. With this book you will be able to analyze every part of a pair of glasses, pick the best frame for a patients face, learn which lens options complement each other (and which ones don't), be able to research contact lens parameter availability, understand symptoms of the most common eye diseases, and separate yourself from the average optician by addressing special circumstances many opticians may handle incorrectly. In addition to ophthalmic optics, you will learn techniques for improving sales and service to help you stand out in the mind of your patients. For example, making each patient a spokesperson for the practice, how to diffuse the dissatisfied patient, increasing your average dollar sale without being a salesperson, troubleshooting, and many more patient-centered skills necessary to keep your patients coming back again and again. This book is unlike others in that it emphasizes clinical relevancy, has extensive training on improving patient perception of quality and service, has forms for copying and using immediately to

Suggested study texts are listed, along with an

appendix on how to take a practical examination. The Ophthalmic Assistant Elsevier Health Sciences Written by an international team of ophthalmic practitioners, this authoritative book is a vital resource not only for ophthalmic professionals, but for any healthcare professional who cares for patients with eye problems. In the ten years since the first

edition was published, practice has moved on, as has the evidence for practice. This second edition draws on the passion and goodwill of the original team of authors, complemented by other colleagues, to fully revise and update the text in line with new findings, new practice and new and exciting treatments. The book is broadly divided into three sections. The first section considers the structure and function

---

of the eye, as well as the basic principles of ophthalmology and eye examination. The second section considers patient care in diverse settings, as well as work-related issues and patient education. It also includes two entirely new chapters on eye banking and global eye health. The third section takes a systematic approach to patient care, working from the front to the

back of the eye, discussing some of the common disorders affecting each structure (such as the lens or cornea) or group of structures (such as the eyelids or lacrimal drainage system). The book concludes with a very useful glossary of ophthalmic terms. Some aspects of practice discussed in the text are, of necessity, UK based, but these are clearly indicated and, wherever possible,

principles (rather than specifics) are addressed and readers are directed to local policies and interpretations. The first edition of this book became a core text for ophthalmic nursing, in particular, and for the education of ophthalmic nurses across the world. This new edition will provide a comprehensive, up-to-date, evidence-based resource for all ophthalmic healthcare

---

professionals. Contents include:
