A pioneering neuroscientist argues

that we are more than our brains. To many, the brain is the seat of personal identity and autonomy. But the way we talk about the brain is often rooted more in mystical conceptions of the soul than in scientific fact. This blinds us to the physical realities of mental function. We ignore bodily influences on our psychology, from chemicals in the blood to bacteria in the gut, and overlook the ways that the environment affects our behavior, via factors varying from subconscious sights and sounds to the weather. As a result, we alternately overestimate our capacity for free will or equate brains to inorganic machines like computers. But a brain is neither a soul nor an electrical network: it is a bodily organ, and it cannot be separated from its surroundings. Our selves aren't just inside our heads--they're spread throughout our bodies and beyond. Only once we come to terms with this can we grasp the true nature of our

Many associate early western music with the likes of Roy Rogers and Gene Autry, but America's first western music craze predates these "singing cowboys" by decades. Written by Tin Pan Alley songsters in the era before radio, the first popular cowboy and Indian songs circulated as piano sheet music and as cylinder and disc recordings played on wind-up talking machines. The colorful fantasies of western life depicted in these songs capitalized on popular fascination with the West stoked by Buffalo Bill's Wild West shows, Owen Wister's novel *The Virginian*, and Edwin S. Porter's film *The Great Train Robbery*. The talking

machine music industry, centered in New York City, used state-of-the-art recording and printing technology to produce and advertise songs about the American West. *Talking Machine West* brings together for the first time the variety of cowboy, cowgirl, and Indian music recorded and sold for mass consumption between 1902 and 1918. In the book's introductory chapters, Michael A. Amundson explains how this music reflected the nostalgic passing of the Indian and the frontier while incorporating modern ragtime music and the racial attitudes of Jim Crow America. Hardly Old West ditties, the songs gave voice to changing ideas about Indians and assimilation, cowboys, the frontier, the rise of the New Woman, and ethnic and racial equality. In the book's second part, a chronological catalogue of fifty-four western recordings provides the full lyrics and history of each song and reproduces in full color the cover art of extant period sheet music. Each entry also describes the song's composer(s), lyricist(s), and sheet music illustrator and directs readers to online digitized recordings of each song. Gorgeously illustrated throughout, this book

is as entertaining as it is informative, offering the first comprehensive account of popular western recorded music in its earliest form.

From the author of the New York Times bestseller *The Inevitable*— a sweeping vision of technology

as a living force that can expand our individual potential In this provocative book, one of today's most respected thinkers turns the conversation about technology on its head by viewing technology as a natural system, an extension of biological evolution. By mapping the behavior of life, we paradoxically get a glimpse at where technology is headed-or "what it wants." Kevin Kelly offers a dozen trajectories in the coming decades for this near-living system. And as we align ourselves with technology's agenda, we can capture its colossal potential. This visionary and optimistic book explores how technology gives our lives greater meaning and is a must-read for anyone curious about the future.

In this, their fifth collaboration, award-winning authors Timothy C. Fabrizio and George F. Paul examine the fascinating and collectible field of phonograph advertising. Whether pragmatic, inspirational, or merely avaricious, talking machine promotion assumed a variety of mantles during its first fifty years. Charming trade cards, brightly lithographed posters, flamboyant letterheads, and a wide variety of bizarre objects emblazoned with marketing slogans were used to sell phonographs and records during the 1877-1929 period.

Additionally, phonograph records were used as a medium for promoting products as disparate

as toothpaste, automobiles, and presidents. Indulge yourself with this visual feast of 450 color illustrations of phonograph and record marketing from yesteryear, plus detailed captions, values, and an insightful text.

The Voice of New Music Atglen, Pa. : Schiffer Pub.

From its earliest years, the United States was a nation of tinkerers: men and women who looked at the world around them and were able to create something genuinely new from what

they saw. Guided by their innate curiosity, a desire to know how things work, and a belief that anything can be improved, amateurs and professionals from Benjamin Franklin to Thomas Edison came up with the inventions that laid the foundations for America's economic dominance. Recently, Americans have come to question whether our tinkering spirit has survived the pressures of ruthless corporate organization and bottom-line driven caution. But as Alec Foege shows in *The Tinkerers*, reports of tinkering's death have been greatly exaggerated. Through the stories of great tinkerers and inventions past and present, Foege documents how Franklin and Edison's modern-day heirs do not allow our cultural obsessions with efficiency and conformity to interfere with their passion and creativity. Tinkering has been the guiding force behind both major corporate-sponsored innovations such as the personal computer and Ethernet, and smaller scale inventions with great potential, such as a machine that can make low-cost eyeglass lenses for people in impoverished countries and a device that uses lasers to shoot malarial mosquitoes out of the sky. Some tinkerers attended the finest engineering schools in the world; some had no formal training in their chosen fields. Some see themselves as solo artists; others emphasize the

importance of working in teams. What binds them together is an ability to subvert the old order, to see fresh potential in existing technologies, and to apply technical know-how to the problems of their day. As anyone who has feared voiding a warranty knows, the complexity of modern systems can be needlessly intimidating. Despite this, tinkerers can -- and do -- come from anywhere, whether it's the R&D lab of a major corporation, a hobbyist's garage, or a summer camp for budding engineers. Through a lively retelling of recent history and captivating interviews with today's most creative innovators, Foege reveals how the tinkering tradition remains, in new and unexpected forms, at the heart of American society and culture.

What Technology Wants Verso Books

The System of Objects is a tour de force—a theoretical letter-in-a-bottle tossed into the ocean in 1968, which brilliantly communicates to us all the live ideas of the day. Pressing Freudian and Saussurean categories into the service of a basically Marxist perspective, The System of Objects offers a cultural critique of the commodity in consumer society. Baudrillard classifies the everyday objects of the “new technical order” as functional, nonfunctional and metafunctional. He contrasts “modern” and “traditional” functional objects, subjecting home furnishing and interior design to a celebrated semiological analysis. His treatment of nonfunctional or “marginal” objects focuses on antiques and the psychology of collecting, while the metafunctional category extends to the useless, the aberrant and even the

“schizofunctional.” Finally, Baudrillard deals at length with the implications of credit and advertising for the commodification of everyday life. The System of Objects is a tour de force of the materialist semiotics of the early Baudrillard, who emerges in retrospect as something of a lightning rod for all the live ideas of the day: Bataille’s political economy of “expenditure” and Mauss’s theory of the gift; Reisman’s lonely crowd and the “technological society” of Jacques Ellul; the structuralism of Roland Barthes in The System of Fashion; Henri Lefebvre’s work on the social construction of space; and last, but not least, Guy Debord’s situationist critique of the spectacle.
