Short Implants Lulu Press, Inc
The MCQs in *Implant Dentistry* is a comprehensive review book that covers all aspects of implant dentistry. It uses questions based on real clinical scenarios with extensive answers based on textbooks and modern literature.

The reader will gain a broad understanding of the scientific basis of dental implants, treatment planning, identification of high risk occlusal forces, managing cantilevers, applied anatomy, biological aspects of dental implants and bone healing, prosthetic components, impression techniques and materials, bone augmentation techniques, different types of bone grafts, autogenous bone graft techniques, calcium metabolism, suture materials, local anaesthetic drugs, nerve injury, medication related osteonecrosis of the jaw, peri-implantitis and implant protected occlusion. The target audience should be dentists with or without prior experience in dental

implants, oral and maxillofacial surgeons and even dental nurses. The book will be of particular interest to candidates sitting exams. *Traumatic Dental Injuries* Elsevier Health Sciences
This book presents all the publicly available questions from the PISA surveys. Some of these questions were used in the PISA 2000, 2003 and 2006 surveys and others were used in developing and trying out the assessment. MCQs, SAQs, EMQs and OSCEs for *Oral Pathology and Oral Medicine* Elsevier Health Sciences
This book has been written with the requirements for students pursuing undergraduate and postgraduate dentistry courses in

mind. To the authors knowledge, several standard tooth morphology books are available; however, the numerous voluminous texts becomes difficult for students to utilise during examination preparation. Therefore, this concise book (although never intended to replace standard textbooks) acts as a fast revision tool and describes examination oriented questions, emphasising in-depth morphological aspects and carving steps for each permanent tooth in this subject on a single platform. Thus this book enlightens the target audience in a simple, logical and well-structured manner, compiled from information found within all standard textbooks of this field. It promotes and enables focused

learning on the topic by sharing essential information from the basics to the level of postgraduate students pursuing specialised courses in dentistry.

MCCQs for Dentistry Elsevier Health Sciences

This book examines the current state of knowledge on why implant failures occur, makes specific recommendations for prevention of failure, and emphasizes the role that maintenance plays in increasing the probability of success.

Current recommendations for the treatment of ailing implants are also reviewed. Prevention begins with appropriate patient

selection and treatment planning, correct implant placement, and effective prosthetic rehabilitation.

All of these aspects are thoroughly discussed. The specifics of maintenance therapy for patients with dental implants are then addressed, bearing in mind that patients on a regular maintenance schedule following completion of active therapy have fewer implant complications. Readers will find information on the frequency of visits as well as step-by-step guidance for a routine visit. In addition, current concepts regarding the etiology of implant failure are covered, with

explanation of their potential implications for maintenance care. The book will be an ideal aid and reference source for all clinicians wishing to stay abreast of the latest knowledge and developments in the field of dental implant diagnosis, maintenance, and therapeutic intervention.

The SAC Classification in Implant Dentistry John Wiley & Sons

"MCCQs, SAQs, EMQs and OSCEs for Oral Pathology and Oral Medicine-An exam-focused Approach" is designed to serve as a companion to the available

textbooks in oral pathology and oral medicine and is meant to serve as a revision tool for dental students and graduates preparing for examinations. The book is structured to complement student lecture notes, recommended textbooks and past exam papers. Globally, the current trend is to use a combination of multiple-choice questions (MCQs), short answer questions (SAQs), extended matching questions (EMQs) and objective structured clinical examination (OSCE) stations

in the examination process. Available textbooks in oral pathology and oral medicine are not of much value to students preparing for exams using these assessment formats. The aim of this book therefore is to offer students with a single source that would assist them to prepare for exams. Target audience for this book includes dental students, oral health therapy and dental hygiene students, overseas-trained dental graduates preparing for board or licensing examinations and those preparing for

membership or fellowship examinations of the Royal Surgical Colleges.
