Relative to the extensive neuroscientific work on seated meditation practices, far less studies have investigated the neural mechanisms underlying movement-based contemplative practices such as yoga or tai chi. Movement-based practices have, however, been found to be effective for relieving the

symptoms of several clinical conditions, and to elicit measurable changes in physiological, neural, and behavioral parameters in healthy individuals. An important challenge for neuroscience is therefore to advance our understanding of the neurophysiological and neurocognitive mechanisms underlying these observed effects, and this Research Topic aims to make a contribution in this regard. It showcases the current state of the art of investigations on movement-based practices including yoga, tai chi, the Feldenkrais Method, as well as dance. Featured contributions include empirical research, proposals of theoretical frameworks, as well as novel perspectives on a variety of issues relevant to the field. This Research Topic is the first of its kind to specifically attempt a neurophysiological and neurocognitive characterization that spans multiple mindful movement

approaches, and we trust it will be of interest to basic scientists, clinical researchers, and contemplative practitioners alike.

This comprehensive, multidisciplinary guide provides an up-to-date presentation of fertility preservation techniques with male cancer patients and other challenging conditions. Divided into four thematic sections, part one provides an overview of the pathophysiologic processes interrelating cancer and its treatment with infertility and discusses different methods of sperm preservation and fertility outcomes in cancer patients. Part two then explores male fertility preservation in various non-cancerous conditions, such as immunosuppressed, hypogonadal and transgender patients. The fundamental

principles of cryobiology and sperm optimization are covered in part three, which also offers essential building blocks for scientists to develop a sperm banking service and implement high standards of practice. The final section describes the current practices of male fertility preservation along with its psychological impact on patients, and extends beyond to future innovative methods—tissue preservation, xenografting and artificial gametes—being researched and implemented in this field. Fertility preservation among cancer patients and survivors is an evolving practice, which involves focused research and timely collaboration of professionals from related fields. *The Complete Guide to Male Fertility Preservation* is unique and original in its design and will appeal to a larger audience of andrologists, reproductive endocrinologists, urologists, embryologists, and all other

Algorithms are a fundamental building block of artificial intelligence - and, increasingly, society - but our legal institutions have largely failed to recognize or respond to this reality. The Cambridge Handbook of the Law of Algorithms, which features contributions from US, EU, and Asian legal scholars, discusses the specific challenges algorithms pose not only to current law, but also - as algorithms replace people as decision makers - to the foundations of society itself. The work includes wide coverage of the law as it relates to algorithms, with chapters analyzing how human biases have crept into

algorithmic decision-making about who receives housing or credit, the length of sentences for defendants convicted of crimes, and many other decisions that impact constitutionally protected groups. Other issues covered in the work include the impact of algorithms on the law of free speech, intellectual property, and commercial and human rights law.

In Freedom's Progress?,

Gerard Casey argues that the progress of freedom has largely consisted in an intermittent and imperfect transition from tribalism to individualism, from the primacy of the collective to the fragile centrality of the individual person and of freedom. Such a transition is, he argues, neither automatic nor complete, nor are relapses to tribalism impossible. The reason for the fragility of freedom is simple: the importance of

individual freedom is simply not obvious to everyone.

Most people want security in this world, not liberty.

'Libertarians,' writes Max

Eastman, 'used to tell us that

"the love of freedom is the strongest of political motives,"

but recent events have taught us the extravagance of this opinion. The "herd-instinct"

and the yearning for paternal authority are often as strong.

Indeed the tendency of men to gang up under a leader and submit to his will is of all

political traits the best attested by history.'

The charm of the collective exercises a perennial magnetic attraction for the

human spirit. In the 20th century, Fascism, Bolshevism and National Socialism were,

Casey argues, each of them a return to tribalism in one

form or another and many aspects of our current

Western welfare states

continue to embody tribalist impulses. Thinkers you would expect to feature in a history of political thought feature in this book - Plato, Aristotle, Machiavelli, Locke, Mill and Marx - but you will also find thinkers treated in *Freedom's Progress?* who don't usually show up in standard accounts - Johannes Althusius, Immanuel Kant, William Godwin, Max Stirner, Joseph Proudhon, Mikhail Bakunin, Pyotr Kropotkin, Josiah Warren, Benjamin Tucker and Auberon Herbert. *Freedom's Progress?* also contains discussions of the broader social and cultural contexts in which politics takes its place, with chapters on slavery, Christianity, the universities, cities, Feudalism, law, kingship, the Reformation, the English Revolution and what Casey calls Twentieth Century

Tribalisms - Bolshevism, Fascism and National Socialism and an extensive chapter on human prehistory. *Research Handbook on Global Administrative Law* Andrews UK Limited

Part Two presents applications of behavioural economics including nudging; heuristics; emotions and morality; behavioural political economy, education, and economic innovation. Concepts for Nursing

Practice E-Book Edward Elgar Publishing

Ever since a democratic system of government was adopted and a strategy of planned economic development was launched in India, the planners were quite conscious of the need for an administrative system

different from the colonial one to implement the planned objective of development. Kuldeep Mathur, in this volume, examines these administrative reforms and provides a magisterial account of the changes in the institutional process of public administration. The introduction of neoliberal policies revived concerns about reform and change, thereby giving rise to a new vocabulary in the discourse of public administration. The conventional world of public administration was now expected to adopt management practices of the private sector and interact with it to achieve public policy goals. New institutions are now being layered on traditional ones, and India is becoming a recipient of managerial ideas whose efficacy has yet to be tested on

Indian soil. In light of the aforementioned changes, this volume argues that hybrid architecture for delivering public goods and services has been the most significant transformation to be institutionalized in the current era and critiques the neoliberal transformation from within a mainstream public administration perspective.

Recent research demonstrates that the quality of public institutions are crucial for a number of important environmental, social, economic, and political outcomes, and thereby human well-being. The Quality of Government (QoG) approach directs attention to issues such as impartiality in the exercise of

public power, professionalism in public service delivery, effective measures against corruption, and meritocracy instead of patronage and nepotism in the hiring of public sector employees. This handbook offer a comprehensive, state of the art overview of this rapidly expanding research field and also identifies viable avenues for future research. The initial chapters focus on theoretical approaches and debates, and the central question of how QoG can be measured. The remaining chapters examine the wealth of empirical research on how QoG relates to democratization, social cohesion, ethnic diversity, human wellbeing, democratic accountability, economic growth, political legitimacy, environmental sustainability, gender quality, and the outbreak of civil conflicts.

These chapters bring evidence to bear to examine, for example, questions of the effect of QoG on subjective well-being (i.e. happiness), social trust and inequality. A third set of chapters turns to the perennial issue of which contextual factors and policy approaches, both national, local and international, have proven successful (and not so successful) for increasing QoG. The Quality of Government approach both challenges and complements important strands of inquiry in the social sciences. For research about democratization, QoG adds the importance of taking state capacity into account. For economics, the QoG approach shows that in order to produce economic prosperity, markets need to be embedded in institutions with a certain set

of qualities. For development studies, QoG emphasizes that issues about corruption are integral to understanding development writ large. Handbook of Leadership and Administration for Special Education John Wiley & Sons This book examines the harmonisation of Intellectual Property (IP) policy, law and administration in Africa. Two recent developments have brought this topic to the fore. The first is the escalation of long-standing efforts to establish a Pan-African Intellectual Property Organisation (PAIPO), a continental

current sub-regional attempt to operationalise the IP provisions of the Southern African Development Community (SADC) 's Protocol on Trade (articles 9b and 24) and its Protocol on Science, Technology and Innovation (article 2m). Intellectual Property Policy, Law and Administration in Africa discusses the viability of such initiatives with particular reference to the current socio-economic status of Africa 's nations. With a view to contributing to future developments in Africa at both a continental and sub-regional level, the author considers this issue through the lens of advancing the public interest in IP. Ncube argues that harmonisation initiatives ought to be crafted in a way that is supportive of the development aspirations of African states. Consequently, she urges due consideration of individual

states' unique conditions and aspirations in any harmonisation venture, a necessity outlined in article 7 of the Agreement on Trade Related Aspects of Intellectual Property Rights.

This book will be of great relevance to scholars and policy makers with an interest in IP law and African law in general.

Developing Teacher Leaders in Special Education Emerald Group Publishing

Diverse international perspectives on the ways in which young children's learning and care may be supported converge in this book. Traversing the field of early childhood education and care from its established philosophical underpinnings to 21st century research, policies, and practices, the contributions to this volume draw together past and present discourses as a basis for shaping future trajectories. In spite of a growing international consensus on the strong influence of early childhood experiences on lifetime outcomes, the nineteen chapters reveal contemporary early childhood pedagogy as a

collection of spaces characterised by plurality, complexity, and dissonance. These characteristics signal the importance of recognising early childhood pedagogies: multiple models of practice for the many diverse learning and care contexts that have the capacity to value young children as individuals and enable each to flourish now and throughout their lives. Moreover, such characteristics disrupt notions that a single 'optimal' early childhood pedagogy is either possible or desirable.
