Now in its eighth edition, *Nursing Home Administration* remains the authoritative textbook detailing the nursing facility administrator role, what they do, how they think, and how they lead. By breaking down the art of administration into its basic, need-to-know tasks—forecasting, planning, organizing, staffing, directing, controlling quality, innovating, and marketing—this text provides the essential context to managing and leading nursing homes and skilled nursing facilities. Thoroughly updated to include the four domains of practice as put forth by the National Association of Long-Term Care Administrator Boards (NAB) for 2022 licensure examination and beyond, this textbook is complete with essential context for the domains and associated competencies to better prepare students for the required NAB examination.

With revised sections addressing new federal regulations and laws affecting the field, best practices in residential care, and refreshed examples and cases, this text continues to set students up for success in working as a nursing facility administrator. Updated sections address changes within the residential care continuum, provide further information on patient-driven payment models and value-based care, and inform current practices for marketing and controlling quality within the long-term care facility. Chapter boxes reflect common pitfalls in practice while real-life case studies and critical thinking exercises, including a "What Do I Do Now?" section that concludes all chapters, encourage students to consider challenges they may experience in the field. In addition to updated domains of practice—care, services, and supports; operations; environmental and quality; and leadership and strategy—the book describes how core

components fit together. New to the Eighth Edition: Includes the updated 2022 domains of practice as they relate to the licensing examination standards of the National Association of Long-Term Care Administrator Boards (NAB) Replete with information on new federal laws, requirements, and regulations including links to important resources such as the Minimum Data Set 3.0 Provides insight into the impact the COVID-19 pandemic has and will create for managing a long-term care facility Introduces Common Pitfalls in Practice sections and "What Do I Do Now?" boxes in each chapter, designed to spark critical thinking and discussion Updated figures, tables, and references throughout Key Features: Provides an in-depth discussion of nursing facility administration Utilizes current data of nursing facility administration and skilled nursing care within the context of the larger long-term care field Case studies throughout the textbook address real-world situations and experiences for administrators and managers in nursing facility administration and skilled nursing care Qualified Instructors can gain access to the book's accompanying Instructor's Manual

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single

largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Education badly needs effective innovations that can help produce high-quality learning outcomes across the system. The primary focus of educational innovations should be on teaching and learning theory and practice, as well as on the learner, parent, community, society, and culture. Technology applications need a solid theoretical foundation based on purposeful, systemic research, and a sound pedagogy. Theoretical and Practical Approaches to Innovation in Higher Education is an essential scholarly publication that outlines the classification of innovations, discusses the hurdles to innovation, and offers ways to increase the scale and rate of innovation-based transformations in the education system. The publication argues that raising the quality and scale of innovations in education will positively affect education itself and benefit society. Highlighting topics such as academic integrity, e-learning, and learner engagement, this book is vital for higher education professionals, academicians, educators, librarians, course designers, researchers, and students.
