Hiroshima is the story of six people—a clerk, a widowed seamstress, a physician, a Methodist minister, a young

surgeon, and a German Catholic priest—who lived through the greatest single manmade disaster in history. In vivid and indelible prose, Pulitzer Prize – winner John Hersey traces the stories of these half-dozen individuals from 8:15 a.m. on August 6, 1945, when Hiroshima was destroyed by the first atomic bomb ever dropped on a city, through the hours and days that followed. Almost four decades after the original publication of this celebrated book, Hersey went back to Hiroshima in search of the

people whose stories he had told, and his account of what he discovered is now the eloquent and moving final chapter of Hiroshima.

What remains of a great sporting spectacle after the last race is run or the final match is played? How can the vast expense of mounting such events be justified? What if there is nothing left behind or what if the legacy is negative, a costly infrastructure which is unused or a debt-ridden host city? The Routledge Handbook of Sport and Legacy addresses perhaps the most important issue in the hosting of major contemporary sporting events: the problem of 'legacy'. It offers a rigorous, innovative and comparative insight into this contested concept from interdisciplinary and practical perspectives. Major events must now have a conscious,

credible and defined policy for legacy to meet public expectations. The book provides a comprehensive survey of the various kinds of legacy that can be delivered, as well as a close examination of the potential benefits and practical challenges involved in each. From 'hard' legacies, such as stadia and infrastructure, to 'soft' legacies including skill development, attitude change and capacity building, the book offers both a historical case study and an innovative strategic management approach, and establishes the limits of what can realistically be achieved in terms of economic, social, cultural, physical and sporting development. The Routledge Handbook of Sport and Legacy includes contributions from world leading scholars and practitioners and features detailed case studies of major sports events from around the

world, including the FIFA World Cup and ten Olympics Games from London in 1908 to London 2012. It is invaluable reading for students and researchers working in sport studies, events management, human geography, economics or planning, and an essential reference for any professional engaged in delivering legacy through sport.

This New York Times–bestselling book upends conventional thinking about autism and suggests a broader model for acceptance, understanding, and full participation in society for people who think differently. What is autism? A lifelong disability, or a naturally occurring form of cognitive difference akin to certain forms of genius? In truth, it is all of these things and more—and the future of our society depends on our understanding it. Wired reporter Steve Silberman unearths the secret history of autism, long suppressed by the same clinicians who became famous for discovering it, and finds surprising answers to the crucial question of why the number of diagnoses has soared in recent years. Going back to the earliest days of autism research, Silberman offers a gripping narrative of Leo Kanner and Hans Asperger, the research pioneers who defined the scope of autism in profoundly

different ways; he then goes on to explore the game-changing concept of neurodiversity. NeuroTribes considers the idea that neurological differences such as autism, dyslexia, and ADHD are not errors of nature or products of the toxic modern world, but the result of natural variations in the human genome. This groundbreaking book will reshape our understanding of the history, meaning, function, and implications of neurodiversity in our world.

What would you give to live forever? Elijah Brighton wants to become an ascender—a post-Singularity human/machine hybrid—after all, they're smarter, more enlightened, more compassionate, and above all, achingly beautiful. But Eli is a legacy human, preserved and cherished for his unaltered genetic code, just like the rainforest he paints.

When a fugue state possesses him and creates great art, Eli miraculously lands a sponsor for the creative Olympics. But once Eli arrives at the Games, he finds the ascenders are playing games of their own. Everything he knows about the ascenders and the legacies they keep starts to unravel... until he's running for his life and wondering who he truly is. A concise survey of the

culture and civilization of mankind, *The Lessons of History* is the result of a lifetime of research from Pulitzer Prize-winning historians Will and Ariel Durant. With their accessible compendium of philosophy and social progress, the Durants take us on a journey through history, exploring the possibilities and limitations of humanity over time. Juxtaposing the great lives, ideas, and accomplishments with cycles of war and conquest, the Durants reveal the towering themes of history and give meaning to our own. *Sensational Crown* This volume shows the influence of the Sage's teachings over the course of Chinese history--on state ideology, the civil service

examination system, imperial government, the family, and social relations--and the fate of Confucianism in China in the nineteenth and twentieth centuries, as China developed alongside a modernizing West and Japan. Some Chinese intellectuals attempted to reform the Confucian tradition to address new needs; others argued for jettisoning it altogether in favor of Western ideas and technology; still others condemned it angrily, arguing that Confucius and his legacy were responsible for China's feudal, "backward" conditions in the twentieth century and launching campaigns to eradicate its influences. Yet Chinese continue to turn to the teachings of Confucianism for guidance in their daily lives.

Invasion ecology is the study of the causes and consequences of the introduction of organisms to areas outside their native range. Interest in this field has exploded in the past few decades. Explaining why and how organisms are moved around the world, how and why some become established and invade, and how best to manage invasive species in the face of global change are all crucial issues that interest biogeographers, ecologists and environmental managers in all parts of the world. This book brings together the insights of more than 50 authors to examine the origins, foundations, current dimensions and potential trajectories of

invasion ecology. It revisits the key tenets of the foundations of invasion ecology, including contributions of pioneering naturalists of the 19th century, including Charles Darwin and British ecologist Charles Elton, whose 1958 monograph on invasive species is widely acknowledged as having focussed scientific attention on biological invasions.

Let's start with two truths about our era that are so inescapable as to have become clichés: We are surrounded by more readily available information than ever before. And a huge percentage of it is inaccurate. Some of the bad info is well-meaning but ignorant. Some of it is deliberately deceptive.

All of it is pernicious. With the internet always at our fingertips, what's a teacher of history to do? Sam Wineburg has answers, beginning with this: We definitely can't stick to the same old read-the-chapter-answer-the-questions-at-the-back snoozefest we've subjected students to for decades. If we want to educate citizens who can sift through the mass of information around them and separate fact from fake, we have to explicitly work to give them the necessary critical thinking tools. Historical thinking, Wineburg shows us in *Why Learn History (When It's Already on Your Phone)*, has nothing to do with test prep-style ability to memorize facts. Instead, it's an orientation to the world that we can cultivate, one that encourages reasoned skepticism, discourages haste, and counters our tendency to confirm our biases. Wineburg draws on surprising discoveries from an array of research and

experiments—including surveys of students, recent attempts to update history curricula, and analyses of how historians, students, and even fact checkers approach online sources—to paint a picture of a dangerously mine-filled landscape, but one that, with care, attention, and awareness, we can all learn to navigate. It's easy to look around at the public consequences of historical ignorance and despair.

Wineburg is here to tell us it doesn't have to be that way. The future of the past may rest on our screens. But its fate rests in our hands.

Globe and Mail Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether

we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

"A gripping, flawlessly researched, and overdue portrait of America’s trailblazing female journalists. Kim Todd has restored these long-forgotten mavericks to their rightful place in American history." — Abbott Kahler, author (as Karen Abbott) of *The Ghosts of Eden Park and Liar, Temptress, Soldier, Spy* A vivid social history that brings to light the “girl stunt reporters” of the Gilded Age who went undercover to expose corruption and abuse in America, and redefined what it meant to be a woman and a journalist—pioneers whose influence continues to be felt today. In the waning years of the nineteenth century, women journalists across the United States risked reputation and their own safety to expose the hazardous conditions under

which many Americans lived undercover into Blackwell's and worked. In various disguises, they stole into sewing factories to report on child labor, fainted in the streets to test public hospital treatment, posed as lobbyists to reveal corrupt politicians. Inventive writers whose in-depth narratives made headlines for weeks at a stretch, these "girl stunt reporters" changed laws, helped launch a labor movement, championed women's rights, and redefined journalism for the modern age. The 1880s and 1890s witnessed a revolution in journalism as publisher titans like Hearst and Pulitzer used weapons of innovation and scandal to battle it out for market share. As they sought new ways to draw readers in, they found their answer in young women flooding into cities to seek their fortunes. When Nellie Bly went

Insane Asylum for Women and emerged with a scathing indictment of what she found there, the resulting sensation created opportunity for a whole new wave of writers. In a time of few jobs and few rights for women, here was a path to lives of excitement and meaning. After only a decade of headlines and fame, though, these trailblazers faced a vicious public backlash. Accused of practicing "yellow journalism," their popularity waned until "stunt reporter" became a badge of shame. But their influence on the field of journalism would arc across a century, from the Progressive Era "muckraking" of the 1900s to the personal "New Journalism" of the 1960s and '70s, to the "immersion journalism" and "creative nonfiction" of today. Bold

and unconventional, these writers changed how people would tell stories forever. *No Equal Justice: The Legacy of Civil Rights Icon George W. Crockett Jr.* University Press of Amer

For more than a million years, man's utter dependence on technology has been producing a host of intricate problems. For example, we steadily reduce the need for human labor while finding ways to increase life expectancy. We mass produce the automobile without grasping the harsh effects it leaves on the environment. The *Human Legacy* concerns the evolution and development of man—physically, socially, psychologically—into the latest version of the species we see around us today. The author paints an intriguing picture of man, living in complex societies and trying to solve the unanticipated consequences of action.

Five hundred years of colonization have taken an incalculable toll on the Indigenous peoples of the Americas: substance use disorders and shockingly high rates of depression, diabetes, and other chronic health conditions brought on by genocide and colonial control. With passionate logic and chillingly clear prose, author and educator Suzanne Methot uses history, human development, and her own and others' stories to trace the roots of Indigenous cultural dislocation and community breakdown in an original and provocative examination of the long-term effects of colonization. But all is not lost. Methot also shows how we can come back from this with Indigenous ways of knowing lighting the way.
